

Statement on European Union Directive 2002/95/EC Restriction of Hazardous Substances (RoHS)

The member states of the European Union have adopted the Directive 2002/95/EC, also known as Restriction of Hazardous Substances (R0HS).

The intent of this directive is to restrict the use of hazardous substances. The directive restricts the use of Lead, Mercury, Cadmium, Hexavalent Chromium, Polybrominated Biphenyls (PBB's) and Polybrominated Diphenylethers (PBDE's) in all electrical and electronic equipment. Permissible limits for these materials have been established at 1,000 ppm with the exception of Cadmium at 100 ppm.

The main goal of the RoHS directive is to establish an appropriate detection of hazardous substances throughout all the supply chain. All members of the supply chain are required to declare the existence of any non-compliance to the maximum permissible values of the listed substances to their immediate downstream product recipient. The directive implicates all raw material suppliers, fabricators, manufacturers and distributors in this process.

Surface Igniter, LLC is committed to support and comply with all the international "green" initiatives designed to protect our health and our environment.

Here in we certify that all silicon carbide hot surface gas ignition products sold by Surface Igniter, LLC are RoHS compliant.
